

Best Practices -i

1. Title: *Purifying drops*

2. Goal:

COVID-19 is the new name for the infectious disease caused by the novel coronavirus SARS-CoV-2. Alcohol-based hand sanitizers help to deter the spread of germs and illness-causing bacteria and virus. Break the chain is the goal proposed by the health ministry of the government of Kerala in order to effectively curb the spread of corona virus. The goal here is to support this mission to meet the sudden surge in the demand of sanitizers.

3. Context:

The panic caused by the rapid spread of the global corona virus pandemic led to the shut down of all regular academic activities in the entire world. The lack of medicines and high death toll left the people clueless. Prevention became the only means to survive. In order to overcome a likely shortage of sanitizers and curb price hike preparing sanitizers at grass root levels became the need of the hour.

4. Practice:

As per the directions given by the faculty members the students participated in preparing hand sanitizers. The prepared sanitizers were distributed among the staff members of the college and were given to the students while entering the campus. And also, they were of immense use in conducting exams and other official meetings. Moreover prepared sanitizer was distributed to the local residents around the college campus.

5. Evidence of Success:

- Students became aware of the use of hand sanitizers and its importance

- Students learned how to prepare sanitizer and they started preparing for distribution.
- Students learned to handle adverse situations and turn it to the benefit of others.

5. Problems Encountered and Resources Required
